

Team Dispark

Dean Compton, Vaughn Ohlerking, Kendall Comeaux, Braylon Fredric

What worked for your project?

All in all, the best and main features were the add parks feature, and the sorting by features bar. They really help the overall functionality of the system, as people often wouldn't want to spend countless minutes trying to find a park that meets their needs, and park owners wouldn't want to deal with the hassle of adding parks directly to the database.

What didn't work for your project?

We were unable to implement the rental portion of the project or the accounts for users but did successfully implement admin accounts.

If you did the project a second time, what things you would do differently?

If we did the project a second time we would focus more on achievable goals and less on big picture features we would not have time to implement. For instance our time would have been better spent implementing smaller features than trying to plan out a complex rental system.

In the face of rapidly changing technology, how would you keep yourself updated with respect to the technological aspects of the project?

We could launch an app, hopefully on the App Store and Google Play, so that people can access our service more easily on mobile devices. We could also add reminders and calendar options for admin and user convenience.
