Different scenarios / User Stories:

- a. User would like to rent a pavilion or other from known park

User knows of a park they would like to rent from so they go to the website of their park of choice. Somewhere on the website, likely underneath “rentals” will be a link to our website, Dispark. They click on the link and it takes them to a page on Dispark, specifically dedicated to the park that their link brought them from.

The page will show pictures of the park, other park goers’ reviews, information on the park all on a sidebar to the left, and in the middle the rentals calendar itself. On the (right?) side of it there will be a list of the available rentals with information on price and the specs of each rental. The calendar will allow the user to skip forward and back by month, and will allow them to select 1 or multiple days (only if they are available). It shows the unavailable days in red, and the available in green. It also has a party size feature in the top right for so that rentals can’t be booked for parties totalling more than the park can handle. Once the user selects available days and an acceptable number of party goers they will be brought to the confirm rental page.

This page shows the info on what they are renting including price, time/date, address, and any additional info like rules and restrictions. Once they confirm, a payment portal is shown (probably paypal) and they are prompted to enter their information. If the renting facility allows it they may choose to defer payment to do it in person. Once completed, user will be notified that payment was successful and their reservation has been made. Dispark will automatically communicate their completed rental to both the renting facility and the renting user via email.

- b. User would like to find a facility to rent but doesn’t know where to go yet

User is looking for a suitable facility or other to rent but doesn’t know where to go. They search the web for park rentals and Dispark pops up. Once they click on the link to Dispark’s website, they will be prompted to enter a location to search for parks in, or to share their location. The user then will be shown a list of parks, ranked from nearest to farthest, showing miles/km, street address, rentals available at each park, and the overall user park ratings. Once they select one they will be directed to that specific park’s page.

The page will show pictures of the park, other parkgoers’ reviews, information on the park all on a sidebar to the left, and in the middle the rentals calendar itself. On the (right?) side of it there will be a list of the available rentals with information on price and the specs of each rental. The calendar will allow the user to skip forward and back by month, and will allow them to select 1 or multiple days (only if they are available). It shows the unavailable days in red, and the available in green. It also has a party size feature in the top right for so that rentals can’t be booked for parties totalling more than the park can handle. Once the user selects available days and an acceptable number of party goers they will be brought to the confirm rental page.

they may choose to defer payment to do it in person. Once completed, user will be notified that payment was successful and their reservation has been made. Dispark will automatically communicate their completed rental to both the renting facility and the renting user via email.

c. User is a park owner who would like to add their park to Dispark's website

This is first initiated by directly contacting Dispark with a link provided at the very bottom of the website. From there the user will be prompted to give a little information about themselves and the park of interest. Once Dispark approves their request, they will be sent a link via email. The link will ask for a short summary of their park including rules and restrictions, pictures of the park, contact information, rentals and their information (pictures optional) and anything else they may need to add. Once complete they will select submit at the bottom of the page. From there Dispark will approve it or request more information. Once it is all set, the park's page is posted to Dispark and Dispark will email a link to the park's page for them to post.
